

MILESTONES FOR SPRINT 1

Sprint Goal:

- Finalize web app proposal, create user stories, sitemap, and wireframe.

Product Backlog

For the features and functionalities of the web app:

User Story Narratives

USER STORIES (Narratives)	ACCEPTANCE CRITERIA	USER STORIES (Narratives)	ACCEPTANCE CRITERIA	USER STORIES (Narratives)	ACCEPTANCE CRITERIA	USER STORIES (Narratives)	ACCEPTANCE CRITERIA
As a student, I want to be able to find free webinars so that I'll be able to learn something new.	Scenario: User is finding webinars to join for free in the internet. Given that the user has access to the site where there are webinars, when they are a registered user only then they could browse through the list of webinars.	As a logged in user, I want to be able to register to webinars without the need to fill out forms every time so that it wouldn't take much time and I won't do it repeatedly.	Scenario: Logged in user wants to register webinars in a click. Given that the user is logged in, have completed the registration form and filled out all needed information and is already verified, when they register to webinars then their profile information will be used and will not ask them to fill out any forms again.	As a logged in user, I want to be able to search with keywords so that I would be able to find the webinars anchored to those filters.	Scenario: Logged in user searches webinars using keyword filters/tags. Given that the user is already logged in, when they will search webinars using keywords, then show results of webinars with those keywords and would show a "no results" prompt when there are no webinars with those tags.	As a registered participant in a webinar, I want to be able to receive a notification as well as an email regarding the confirmation of the webinar so that I know that I am registered.	Scenario: Logged in user registers in a webinar and receives confirmation email. Given that the user is already logged in, when they register to a webinar then there must be a confirmation prompt for successful registration and a confirmation email generated stating they've registered to the webinar.
As a logged in user, I want to be able to see different webinars that will be held in the future so that I will be able to join.	Scenario: Logged in user sees different webinars to be held in the future. Given that the user is already logged in, when they are in the main webinar dashboard and click on a specific webinar, then they could see the date when the webinar will happen and other information regarding it.	As a logged in user, I want my registered webinars to be added automatically in a calendar so that I'll be able to see the schedule.	Scenario: Logged in user sees schedule of registered webinars automatically on calendar. Given that the user is logged in and is at the profile dashboard, when they have registered to a webinar then the schedule of the webinar will automatically be added to the calendar in the web app.	As a logged in user, I want my login details to be remembered so that I don't need to type it every time.	Scenario: User logs in to the web app. Given that the user has logged out, when they want to log in the web app again then there will be a remember me suggestion of their email addressed used to log in.	As an organizer, I want to be able to view the basic info and number of participants who've registered to the webinar so that we will be able to know the number of people.	Scenario: Logged in user of the organization views information on registered participants in the webinar. Given that the user is the organization and is logged in, when they are in the profile dashboard and click on registered participants, then they are able to see the basic information of the registered participants and number of participants.
As a logged in user, I want to be notified before the event of the webinar so that I won't forget to attend.	Scenario: Logged in user reminded for the webinar. Given that the user is already logged in, when they register for a webinar then they are able to set a reminder in the calendar.	As a logged in user, I want to be notified/prompted when there will be a conflict in the my scheduled webinar to the webinar I will just about to register so that I'll be informed about it.	Scenario: Logged in user is notified/prompted for conflict of webinar schedule. Given that the user is already logged in, when they will be registering on a webinar that conflicts on their prior scheduled webinar, then ensure that there will be a notification/prompt indicating that there is a conflict on the schedule for them to continue to register or not.	As a logged in user, I want to be able to see webinars available for the current month in the dashboard so that I'll be able to know which webinars are being hold in the month.	Scenario: Logged in user sees webinars for the month in main dashboard. Given that the user is already logged in, when they are in the main webinar dashboard then they are able to see the list containing the webinars of the month in it.	As an organizer, I want to be able to post the org's events in the main webinar dashboard.	Scenario: Logged in user of organization posts webinar. Given that the user is the organization and is logged in, when they will post their webinars through clicking the create new post button found in their dashboard then it will automatically add through the list of webinars in the main webinar dashboard and show notification that it has been successfully posted or not.
As a logged in user, I want to edit my information so that I would be able to update existing info.	Scenario: Logged in user edits profile information. Given that the user is logged in, when they have to update their personal information then they go to their profile and edit their information and confirm the update for their profile.	As a logged in user, I want to see the number of registrants in a webinar easily so that I have an idea of how many participants will join.	Scenario: Logged in user sees number of registrants of webinar. Given that the user is already logged in, when they browse through webinars then ensure they could see number of registrants on the webinar in the webinar card.	As a user who is interested in specific fields, I want to be able to search and join webinars that fit my interests so that I don't need to go through a lot of webinars.	Scenario: Logged in user searches webinars according to her interests. Given that the user is a logged in user and is interested on a specific field, when they search webinars then show results with the tags the user typed on the search bar and show no results when no match found.		
As a potential user, I want to sign up using the email address I already have so that I would not make a new one.	Scenario: Potential user signs up using existing email address. Given that the potential user already has a google account and is valid, when they sign up for a new account, then they will be able to use their existing google account for it and will use that account for the web app.			As an organizer, I want to be able to add corresponding tags for the webinar so that it would be easier for users to find.	Scenario: Logged in user of the organization creates post for webinar. Given that the user is the organization and is logged in, when they will create posts for their webinars then they could add tags for their webinar.		

Acceptance criteria for user stories

USER / ORGANIZATION MANAGEMENT						WEBINAR MANAGEMENT						
User activities	Sign-up	Registration Form	Login	Profile Dashboard User	Profile Dashboard Organization	Setting / Preferences	Webinar Content	List of Webinars	Calendar Activities	Webinar dashboard	Save webinars to list	Joining Webinar/s
User tasks	sign up account	fill out registration form	log in account	view profile	view profile	edit information	Organization Post webinars	Search webinars	View schedule of registered webinars	Browse through the dashboard	press a button to add it to favorite list	Join webinar
User stories	able to sign up using alternative accounts	fill out forms only once	log in with a click	View registered webinars	View registered participants	edit / update information	easily add webinar to webinar dashboard	able to use keywords in searching webinars	view registered webinars in calendar	has a feature page	saves webinars onto the list	press a button to be registered to the webinar
	Email confirmation	fill out basic information		view calendar with webinar schedule	view calendar with scheduled event posted for webinar	change profile picture	include necessary info and description of webinar	show results from keywords	registered webinars are automatically added to calendar	Webinars for the current month	remove favorites on list	send confirmation to email provided
	Remember me option	state interested fields		favorite list for webinars	add social media links of organization		add tags for webinar categorization	Notify user for upcoming webinar	Categorize webinars based on their respective fields			helpness to video conferencing app once webinar link is pressed
							add type of video conference application to be used	Email notification of upcoming webinar	see number of registrants registered			
							add type of target audience			Categorize free and paid webinars		
							add supplementary links for the event					

User Story Mapping

ON-THE-HOME OLIVIA

On-the-home Olivia is your student who continues her studies online in the comforts of her home ever since the pandemic happened. Because of this, she hasn't been able to attend various seminars and events physically due to the safety protocols issued at their area. She resulted in participating through online webinars instead. However, she finds it difficult and troublesome to find webinars she's interested in attending to. She wants to be able to be productive and learn more through participating to various webinars amidst staying at home.

NEEDS

- A platform for various webinars
- Able to join webinars that suits her interests
- Free availability for the webinars
- Register to webinars in a click

WANTS

- Able to search webinars that interest her
- See scheduled webinars in a calendar
- Reminder about webinar

OUTREACHING ORGANIZATION

Outreaching Organization is an organization that aims to reach out to potential participants for their event remotely. Instead of doing physical events and programs, they shifted to holding events online. Since they are now holding events online, they want to reach out to more participants who are interested in participating to their events. They want to be able to increase their level of participation and interaction among various people and promote their events in a platform where people are able to see their upcoming events.

NEEDS

- A platform to post their webinar events
- Able to reach out to people who are interested on their event
- Able to reach a wider audience

WANTS

- Able to view people who've registered on their event
- Add social media links of the organization

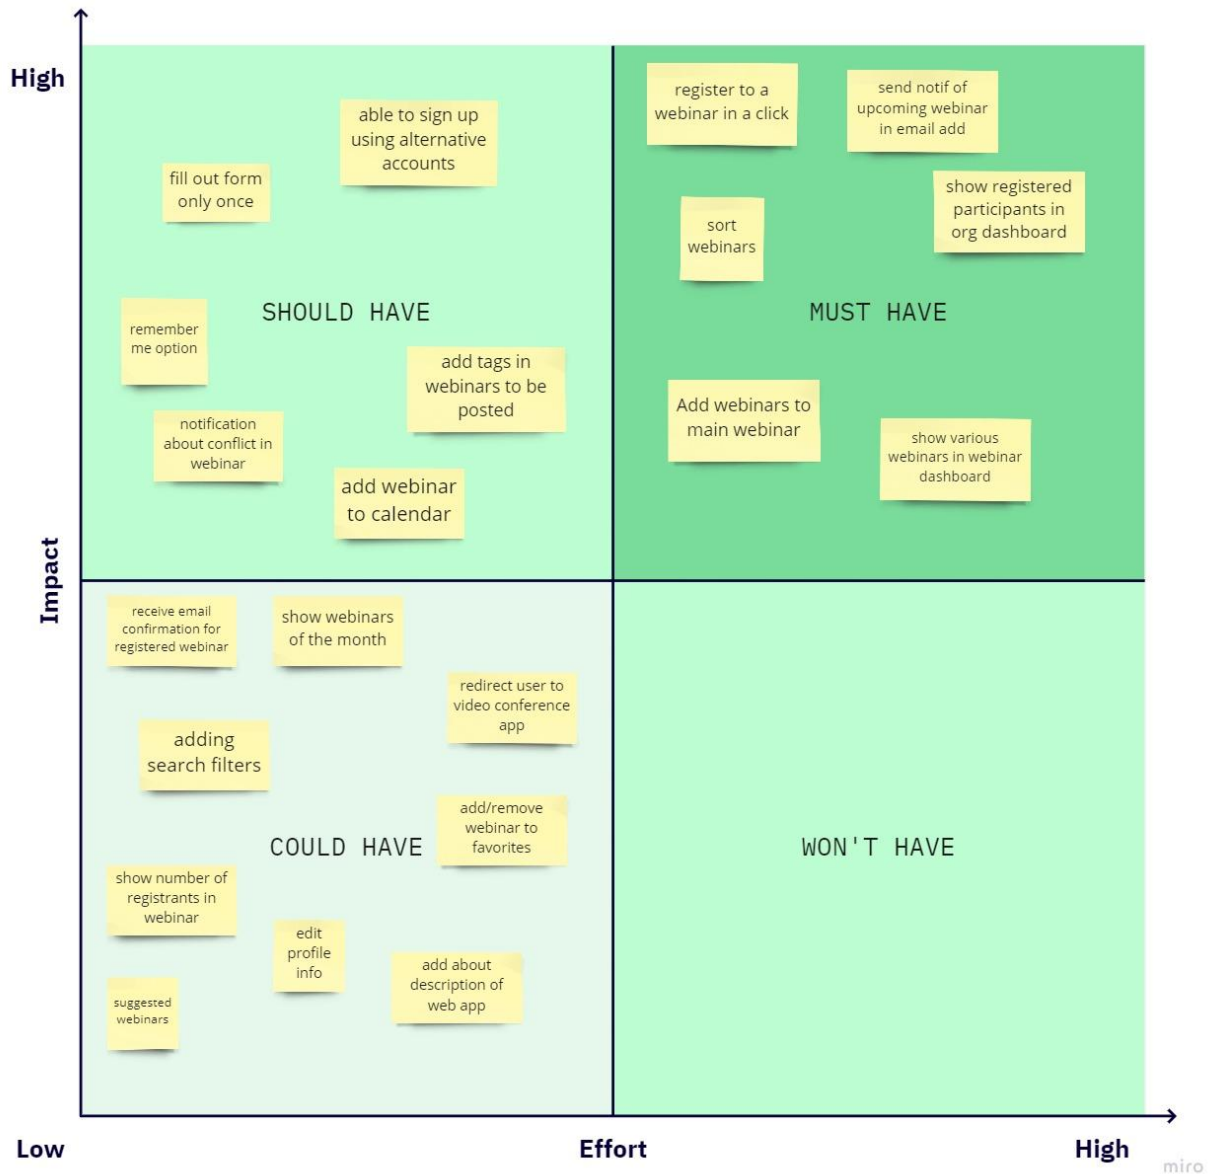

User Story Cards

	STORY	VALUE	BFTB
fill out form only once	2	55	27.50
able to sign up using alternative accounts	2	34	17
register to a webinar in a click	8	55	6.88
remember me option	3	13	4.33
add tags in webinars to be posted	8	34	4.25
send notif of upcoming webinar in email add	8	34	4.25
show various webinars in webinar dashboard	13	55	4.23
show registered participants in org dashboard	21	55	2.62
notification about conflict in webinar	8	13	1.63
show webinars of the month	21	34	1.62

	STORY	VALUE	BFTB
Add webinars to main webinar	55	55	1
sort webinars	34	34	1
receive email confirmation for registered webinar	21	21	1
adding search filters	13	13	1
add webinar to calendar	34	21	0.62
add/remove webinar to favorites	5	3	0.60
edit profile info	5	3	0.60
redirect user to video conference app	13	5	0.38
show number of registrants in webinar	21	5	0.24
suggested webinars	34	8	0.24
